Testimony: I would like to introduce myself to the council and attendees - I am a young professional who moved back home after 10 years on the mainland to support my family businesses. My academic background in data science and computational hydrology/biogeochemistry has allowed me to work and learn in different industries, including quantitative finance and wearable technology. Now, my focus is to give back to Hawaii and my community in the best way possible. To serve on the Board of Water Supply is a job I do not and will not take lightly; I represent the next generation and intend to continue to preserve clean, dependable, and affordable water for our future.
